

Hello,

We want to let you know that the exemptions function in the School Nurse Module is not working at this time. We understand this affects your ability to fully do your job, and we're sorry for the disruption. We are actively working on a fix and are collaborating closely with IDOH to get this resolved as quickly as possible.

While we work on this, you can continue to use CHIRP as usual for everything other than exemptions. School-based users can still:

- View student immunization records
- Access, create, and edit school rosters
- Run reports and verify immunization compliance by vaccine series
- Generate Official State Immunization Reports

As the new school year gets underway, we encourage you to prioritize building and validating your current rosters, which you have full access to in CHIRP. Getting rosters accurate and up to date now will set you up for a smoother year and make it easier to pick back up with exemptions once that feature is restored. In the meantime, when reviewing student compliance, we recommend confirming any vaccine exemptions directly with students' parents or guardians, as well as within your own school-based systems, so they are accurately accounted for.

Once the fix is complete, you will be notified and be able to add and track student exemptions by disease and evidence of immunity by disease, and exemptions will also be viewable on the Student Aggregate Report.

We appreciate your patience as we work to resolve this. If you have any questions, please reach out to Schoolvax@health.in.gov.

Thank you,

STChealth
